C	Consulted	Marketing Manager, Finance Manager
I	Informed	C-Level

Problem Identification

How can the Corporate segment increase its profit by 10% over the next 2 months after experiencing a 13.6% profit decline despite an increase in sales?

Objective

To identify the key factors contributing to the 13.6% decline in Corporate segment profit despite sales growth, and propose recommendations to improve Corporate profit by 10% over the next 2 months.

Root Cause Analysis (Issue Tree)

Hypothesis

Root Causes	Hypothesis	Prioritization
Product Mix (Furniture)	Furniture is the primary driver of the Corporate profit decline.	High
Product Mix (Low-Margin SKUs)	Sales growth is driven by low-margin products.	High
Customer Behaviour	Corporate profit depends on a small number of key accounts.	Medium
Cost to Serve	Rising fulfilment, shipping and return costs on Furniture erode profit per order.	Medium
Pricing & Discount	Excessive volume discounts to Corporate reduce the profit margin.	High

Metrics

Prioritized Hypotheses	Metrics	Reasoning
Furniture drives the Corporate profit decline.	Gross profit margin % of Furniture in Corporate	Furniture is the only category in decline (-56.6%). Margin tells us if it is being sold below cost.
Sales growth comes from low-margin products.	Profit per \$1 of sales, by category	Sales rose 20.4% while profit rose only 14.2%, so the mix is thinning margin.
Excessive discounts erode Corporate margin.	Average discount rate % per Corporate order	A discount ceiling is the fastest lever and can be enforced within one quarter.
Corporate profit depends on a few key accounts.	Revenue share % of the top 10 Corporate accounts	Canon alone holds \$20.3K of profit, so a handful of buyers can push for discounts.
Cost to serve rises with order frequency.	Profit per order, plus average order value	Orders rose 28.3% but customers only 8.6%, so each order is getting smaller.

Key Insights from the Dashboard

Segment

Corporate is the only segment with negative profit growth, down 13.6% to \$26.8K, while Consumer grew 27.4% and Home Office 40.3%.

Category

Furniture is the only category in decline, down 56.6% to \$3.0K, while Technology grew 27.4% and Office Supplies 13.3%.

Margin

Sales grew 20.4% but profit only 14.2%. That six-point gap means margin is thinning while demand holds up.

Orders and accounts

Orders rose 28.3% while customers rose only 8.6%. Canon alone holds \$20.3K of profit, so the buyer base is narrow.

OBIPR

Observation	Business Impact	Isolation	Prioritization	Recommendation
Furniture profit fell 56.6% to \$3.0K, the only category in the red.	The single biggest drag on Corporate profit.	Compare margin per Furniture sub-category, Corporate only.	High Biggest impact. Needs margin data first.	Delist or reprice Tables and Bookcases for Corporate.
Sales grew 20.4% but profit grew only 14.2%.	Margin thins on every extra dollar of revenue.	Compare discount rate by segment and margin per discount band.	High An internal policy change, so it is the fastest lever.	Cap Corporate discounts at 15% and require approval above that.
Orders rose 28.3% while customers rose 8.6%.	The same accounts order more often, so profit per order falls.	Track average order value and profit per order, Corporate vs Consumer.	Medium Easy to enforce, but it only lifts order economics.	Set a minimum order value and bundle low-margin items.
Canon holds \$20.3K of profit and the top customer \$6.8K.	A few accounts hold enough weight to push for discounts.	Measure revenue share of the top 10 accounts.	Medium A durable fix, but slow to show up in profit.	Run a B2B acquisition programme to widen the base.

Key Takeaways

Top root causes

Furniture profit collapse, low-margin sales mix, excessive discounting, and dependence on a few key accounts.

What the data shows

Corporate is the only losing segment and Furniture the only losing category. Whether the two are connected still needs segment-level data.

What must be verified

Transaction-level discount rates, margins for Tables and Bookcases, and revenue share of the top 10 accounts.

Sequenced action

Start with a cap on discounts. Fix the Furniture assortment next, then order economics, and widen the account base last.

BUSINESS IMPACT STATEMENT

Capping discounts, repricing the Furniture assortment, and rewarding order value over order volume should bring Corporate profit back to growth without giving up the 20.4% sales momentum RevoShion already has.
